

XERA Accelerates Linear and Investigative Review Workflow.

Document Compare gives reviewers the ability to quickly pinpoint and identify differences in near duplicate and other similar documents, enabling reviewers to gain a better understanding of document content and variations, reducing the time required to make informed coding decisions.

Fast Identification of Document Differences

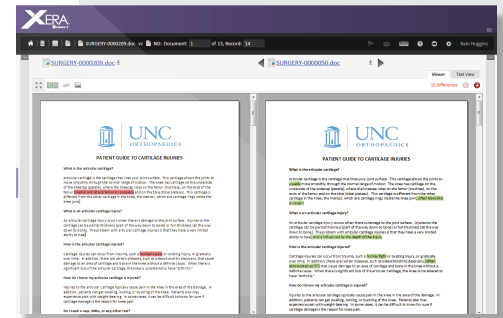

- Target any set of documents in XERA to visually compare differences.
- Leverage Document Compare by choosing a set of similar documents to gain visual insight into what has been changed.
- Prioritize document group differences, sorting by significance.
- Zero in on near-duplicate differences using the Compare tab.
- Easily review what has been changed or added by color, rather than wading through strikethroughs and underlines.

Flexible and Fluid Review

- Select a view of your choice - a native or text view is available - to compare documents. Document Compare not only compares body text, but also metadata, giving you the ability to easily determine the differences in key metadata fields.
- Collaborate in real-time with project members by posting comments to a whole document or text within a document.
- Easily code all similar documents with the same review designation with one click.

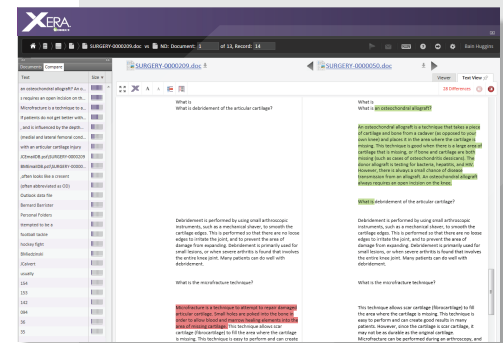

The XERA Advantage

- Compare native files and metadata side-by-side to strengthen coding decisions and investigations.
- Clearly sort differences based on the strength of their similarity.
- Visually review and navigate through document differences with color-coded highlights.
- Easily bulk-code similar documents.
- Access anytime and anywhere through a web-based browser, including Safari® and Chrome®.
- Ideal for use with third party products.

Native File View

- Split-screen view for comparative review; easily flip between this display, or choose to display just one of the two documents

Text View

- Deep comparison of header and other metadata details helps reviewers fully understand document content
