

Combine your knowledge, XERA technology and adaptable infrastructure to meet the demands of your next project.

FLEXIBILITY AND ADAPTABILITY

Stay focused on your case while XERA in the Cloud takes care of the rest. XERA's adaptability and scalability are ideal for single or multiple project deployments in an environment that allows direct access to the administrative controls necessary to plan and implement your next project. Seamless to the end user, XERA enables the ability to review, analyze and produce in an intuitive interface that works the way you do.

PREDICTABLE COSTS

When employing XERA in the Cloud, there is no need to upgrade servers, routers, and any other physical components — they are included in the monthly cloud fees — and no need to replace failed hardware. XERA in the Cloud eliminates two major IT cost burdens as well as the potential for continuous IT budget revisions as deadlines approach.

DYNAMIC SCALING

When cases grow from small to large, scaling hardware to correspond with expanded storage requirements and increased review staff load becomes a simple phone call. All systems are designed with expansion and flexibility in mind, with the ability to scale the resources of your XERA cloud to accommodate your needs. As your business grows, resources can be added easily and, if your case ends, those same resources can be scaled back. No waste.

ANYTIME, FROM ANYWHERE

As with all cloud models, Infrastructure as a Service clouds provide the convenience of accessing your data from any location, via any device with an internet connection. Whether you are in the office or away, and using a desktop, laptop or tablet, your data is always accessible.

XERA QUALIFIED

iCONNECT has worked with cloud providers worldwide to ensure that the XERA platform configuration has been tested to meet and exceed XERA's installation specification. From uploading files and information, through document review, analysis and productions, we've tested the system to make sure it meets the needs of an individual project, or an outsourced litigation eDiscovery department.

Reach beyond the status quo with an intuitive document review platform that works the way you think, with flexible installation options.

IN-HOUSE

Deploy XERA inside your firewall with your infrastructure and staffing.

LSP

Our worldwide network of LSPs offer full litigation support services and project management.

CLOUD

Work with a qualified XERA cloud provider for full access and control of your system — off-site.
