

Create it. Search it. Review it.

iCONNECT-XERA Advanced Analytics features Xmplar “Custom Find Similar” functionality.

Xmplar enables users to collaboratively create a customized “hot doc,” to act as a model or “exemplar.” You get more control over both conceptual searches and seeding for Predictive Coding workflows. The result – fewer false positives and more specific search results.

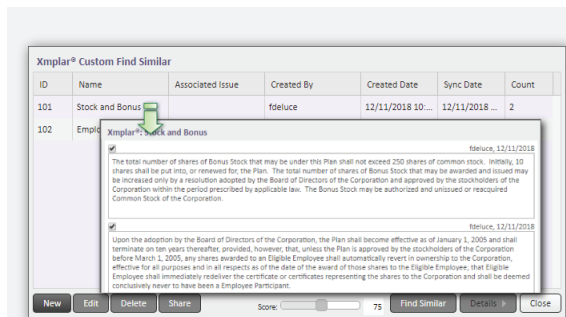

Use Xmplar with any linear review project or in tandem with a Predictive Coding workflow to retrieve documents that contain similar concepts to the Xmplar itself. In mere seconds, iCONNECT-XERA returns what you are looking for.

Simple Use

- Create perfect documents by selecting text and adding text right from Document View
- Capture important concepts and use them as seeds in a Predictive Review workflow
- Reduce time spent looking for perfect documents
- Minimize number of searches
- Fine tune Predictive Review training with key documents
- Minimize issues related to “false positives”

Seamless, Extendable Workflow

- Craft documents in native languages for international review
- Fine tune Predictive Review training and speed review
- Integrate conceptual findings with statistical sampling for focused review
- Build a non-responsive Xmplar to verify production requirements

“We get to the facts so that we can apply the facts to the law and then, as lawyers, we tell a story. The ability to create the hot-zones (in Xmplar®), and the ability to annotate and mark up specific pieces and begin to pull that level of content importance is valuable, and it’s not something I’ve seen in any other tools.”

Ron Best
EDD Staff Attorney and Director, Litigation Systems
Munger, Tolles & Olson
