

# Cluster it. Thread it. Analyze it.

## Flexible Analytics Fit and Support Your eDiscovery Workflows

### iVIEW DATA VISUALIZER

Perform early case assessment: analyze the document collection using iCONNECT-XERA's unique and flexible graphing tools.

Monitor review progress to control budgets and meet deadlines.

# Available with the iCONNECT Analytics Engine

## PREDICTIVE CODING

Use machine learning to extend coding decisions across data sets

Choose TAR 1.0 or the 2.0 continuous learning workflow with issue identification to quickly find case facts and streamline document review.

## INTELLIGENT BATCHING

Increase reviewer efficiency

Create precise review batches with the option to include email threads.

## CLUSTERS

Uncover and analyze key ideas within the dataset with no human intervention

View and interact with concept clusters using the mosaic graph.

## DOCUMENT COMPARE

---

### Learn the document history

Assess variations in near duplicates and document versions by comparing highlighted differences side-by-side.

## DISTRIBUTED SAMPLE

---

### Test data from across the concept clusters

Let the system create a statistical sample of documents from all clusters to create a defensible control set.

## XEMPLAR

---

### Eliminate false positives and reduce system training time

Compile the perfect example document to teach the system what you are looking for.

## EMAIL THREADING

---

### Understand communications in context

Group and review emails by conversation with associated attachments.

## INCLUSIVE EMAIL ID

---

### Eliminate review redundancy

Review only the final email in a conversation thread.

## NEAR DUPLICATES

---

### Increase coding consistency

Gather and review multiple document versions together.

## CONCEPTUALLY SIMILAR

---

Find documents that contain the same concepts even when they don't contain the same words.
