

Connection Simplified

Write it. Connect it. Run it.

Create seamless workflows with direct third party integrations using the iCONNECT Software Development Kit (SDK).

The iCONNECT API is an intuitive RESTful library that allow you to push, pull and update data and various objects like fields in an iCONNECT database.

The iCONNECT API uses common RESTful verbs: GET, POST, PUT and DELETE requests with JSON arguments and JSON responses. Authentication is via OAuth 2.0 using a Bearer token authorization request header.

DIRECT INJECTION OF DATA FROM YOUR APPLICATION

Utilize the SDK within your in-house tools to push data directly into iCONNECT projects.

UTILIZE UPDATE COMMANDS

Manage multiple loads for the same data set, and push from multiple data sources simultaneously.

FULL DOCUMENTS PROFILES ACCEPTED

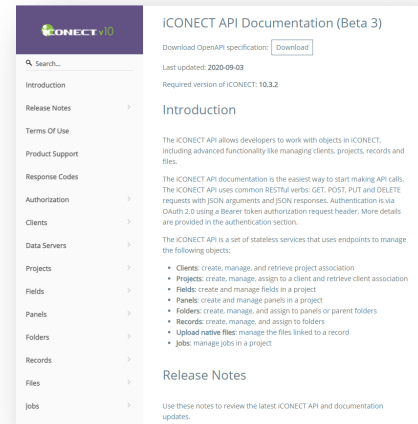

iCONNECT projects will handle metadata, body text and date field information.

SUPPORT FOR DOCUMENT CLASSIFICATION AND ORGANIZATION

Retain document setup with easy transfer of documents to panels and folders in iCONNECT.

SPECIALIZED CODING FROM YOUR EXISTING APPLICATION

Don't lose the work already completed. Import it with your document data

Check out the iCONNECT open API at api.iconect.com

CHOOSE THE DATA POINTS THAT WORK FOR YOU

- Client Mapping
- Create database, fields and field properties (date, numeric, text, native file, percentage, currency) to match your requirements
- Full date formatting options
